

## Disposal of Chemical Containers

- Chemical containers that still have product in them cannot go into your regular trash. They are hazardous waste and must be disposed of properly.
- Empty Chemical containers must be rinsed prior to disposal. The rinse water should be used in your garden just the same as the original chemical. It cannot go down the drain.

## Recycle:

Recycle what you must:

- Division 20 of the Health and Safety Code requires motor oil recycling.
- Section 66822 of the California Code requires lead acid battery recycling.

Recycling what you can:

- Metal scraps
- Used tires, paper and cardboard
- Containers glass, aluminum, and tin
- Water-based paints

## Spill Control

- Be prepared for spills
- Clean up spills using absorbent materials and then dispose of all waste properly.

Recycling & Hazardous Waste Disposal:

**Integrated Waste  
Management Authority  
805-782-8530**

To Report a Spill, Illegal Dumping or  
a Clogged Storm Drain, Please Call:

**City of Grover Beach

# Stormwater Best Management Practices Landscaping, Gardening & Pest Control

**City of Grover Beach  
PUBLIC WORKS DEPARTMENT**

**805-473-4530**

## Landscaping, Gardening and Pest Control

### What are some of the potential pollutant sources?

#### Landscaping and Gardening

- Dirt / Soil / Rocks / Bark and other landscaping materials
- Vegetation removal
- Herbicides, insecticides and fertilizers
- Over watering

#### Pest Control

- Toxic chemicals
- Hazardous wastes

### BEST MANAGEMENT PRACTICES

#### Landscaping and Gardening

- Do not over water. Conserve water by using irrigation practices such as drip irrigation, soaker hoses or micro-spray systems.
- Recycle tree clippings and pruning waste
- Do not blow or rake leaves into street, gutter or storm drains
- Plan landscaping activities during dry weather
- Protect storm drains when doing excavating to prevent soil and sediment from entering the storm drain system.
- Protect stockpiles of materials with tarps or temporary roofs to protect them from rain and wind erosion.
- Fertilize using organic or non-toxic products. Do not over fertilize, follow directions for use.
- Store fertilizer in a protected area to prevent run off.
- Use herbicides that are non-toxic. Follow all directions on the label for use.
- Plant California native, drought resistant or low water using plants, flowers, shrubs and ground cover.
- Use your green waste can to dispose of grass clippings and other yard waste.

- Recycle and compost as an alternative for yard wastes.
- Plant vegetation in dirt / exposed areas that have a potential for erosion.
- Over watering will cause run off that carries yard waste, pesticides, herbicides and fertilizers into the storm drain system. Do not over water.

#### Pesticides and Alternatives

- Implement Integrated Pest Management (IPM)
  - A) Physical Controls
    - Caulking holes that pests can get into
    - Create barriers to pests
    - Remove pests by hand picking
    - Use traps
  - B) Biological Controls
    - Predatory insects (e.g. Green lacewings eat aphids)
    - Bacterial insecticides (e.g. Bacillus thuringiensis kills Caterpillars)
  - C) Chemical Controls
    - The least toxic products
    - Dehydrating dusts (e.g. silica gel)
    - Insecticidal soaps
    - Boric Acid powder
    - Horticultural oils
    - Pyrethrin-based insecticides

#### If you must use chemicals:

- Use a pesticide that is specifically designed to control your pest. The insect should be listed on the label. Approximately 90% of the insects on your lawn and garden are not harmful.
- Read labels and use only as directed. Many home gardeners use pesticides at over 20 times the rate that farmers do.
- Do not use pesticides if rain is expected.
- Never use pesticides near waterways, creeks, rivers or the ocean.

### GARDEN INSECT HELPERS?

**Lacewings:** Devour aphids, thrips, mealybugs, scale, spider mites, leafhoppers and insect eggs and can be found on lilac, daisies, goldenrod and other flowers and plants.

**Soldier Beetle:** Eats aphids and other soft bodied insects. Is attracted to Goldenrod.

**Dragonfly:** Goes after flying insects like flies, midges and mosquitoes and is attracted to any of your water plants.

**Bee:** Needed for pollination of our flowers, plants and vegetables, loves to visit just about every type of flower.

**Syrphid Fly:** Hunts aphids, mealybugs and other pests and pollinates too, just like the bee, loves most flowers.

**Ground Beetle:** Goes after slugs, snails, cutworms and root maggots and can be found on the ground in your garden.

**Spider:** Probably the greatest predator in your garden. Goes after many types of insects and can be seen in all parts of your garden.

**Parasitic Wasp:** Lays its eggs on pests and their eggs. As the larvae hatch, they eat the pest. They like Goldenrod, Buckwheat, Sunflowers and Yarrow.

**Tachinid Fly:** Eats caterpillars and beetles and is attracted to Buckwheat.

**Ladybug:** Eats aphids, scale, thrips, mealybugs and spider mites and can be found on Yarrow, Buckwheat, Lilac and Asters.
